

EDUCATION

B.Tech CSBS - Sri Eshwar College of Engineering CGPA:8.3 (UPTO 3 rd SEMESTER)	2024-2028
HSC – KPM Matric Hr Sec School 88.3%	2022-2024
SSLC - KPM Matric Hr Sec School 91.2%	2021-2022

INTERNSHIP

BYTES-MERN	2025
Developed dynamic and scalable web application using MERN stack, focusing responsive UI/UX and real time data processing. Along with I experienced the Hands-on working with Projects.	

PROJECTS

SMART INTERVIEW PREP BUDDY	2025
-----------------------------------	-------------

Smart Interview Prep Buddy is a web app that helps users practice for job interviews through quizzes. It tracks user progress and shows reports to help them improve.

Tech Stack: Python,MongoDb,Django

SEASHIELD

SeaShield is a coastal safety application designed to help fishermen avoid crossing maritime boundaries by using offline geo-fencing technology. The system provides location-based alerts even in no-network conditions, enabling safer navigation in remote sea areas. It also includes a responsive interface, secure authentication, and scalable backend support to deliver reliable and practical assistance for coastal user

Tech stack: MERN Stack (MongoDB, Express.js, React.js, Node.js), HTML, CSS, JavaScript

CARE CONNECT

2025

Care Connect is an AI-driven, multilingual healthcare chatbot developed for the Odisha Government to enhance public health accessibility. It offers symptom checking, vaccination reminders, maternal care guidance, and real-time outbreak alerts through voice, text, and avatar-based interactions. Built with Flask, Lang Chain, MongoDB, Chroma DB, and OpenAI models, it bridges the gap between citizens and healthcare services—especially in rural regions—by promoting disease awareness and preventive care.

Tech Stack: HTML, JavaScript, Flask, Tailwind CSS, MongoDB, Lang Chain, OpenAI

QUEUEMASTER

2026

QueueMaster is an AI-powered smart queue management system designed to reduce waiting time and improve service efficiency in public places such as hospitals, banks, and government offices. It allows users to book tokens online, track real-time queue status, and receive notifications when their turn approaches. The system uses AI-based predictions to estimate waiting times and optimize queue flow, ensuring a smoother and more organized service experience.

Tech Stack: HTML, JavaScript, Flask, Tailwind CSS, MongoDB, AI-based Queue Prediction Models.
